

How To Create The SMTP Profile

SMTP or *Simple Mail Transfer Protocol* is the way to send the email messages from server to another server through the Internet Protocol or IP. Most email software is designed to use SMTP when sending email.

FusionHQ allows you to set up the SMTP profile so that our software can communicate with your host server. And you will be able to import the subscriber list and send the autoresponder messages to them through your host server by using our software. Please make sure that you have the correct SMTP details from your host provider.

Please make sure that you understand the **deliverability and blacklisting warning** before creating the profile.

Step 1: Go to "**Setup**" and continue to "**3rd Party**".

Step 2: Create the "**External SMTP**" profile.

Step 3: Name the profile. This is for your reference only.

Edit Profile [X]

Deliverability and blacklisting warning! [?]

Name: *(for your reference only)* ←

SMTP Host: Port:

SMTP connection: Normal SSL TLS

Sending Speed: emails per hour

Username:

Password: Show Characters

Cloak link to: [v]

Advanced

Step 4: Input the SMTP Host details and Port. Usually, it is mail.yourdomain.com or smtp.yourdomain.com. Please check the details with your hosting provider.

Edit Profile [X]

Name: *(for your reference only)*

SMTP Host: ← Port:

SMTP connection: Normal SSL TLS

Sending Speed: emails per hour

Username:

Password: Show Characters

Cloak link to: [v]

Advanced

Step 5: Enable the "SMTP connection" option. Please check the details with your hosting provider or experts.

[Save] [Cancel]

Step 7: Fill in the username & password of your email account. Some hosting providers use your email account. Others use email+yourdomain.com. Please be sure that you have input the details correctly.

The screenshot shows the 'Edit Profile' form with the following fields and values:

- Name:** tanya smtp (for your reference only)
- SMTP Host:** mail.imthaitv.com
- Port:** 25
- SMTP connection:** Normal (selected), SSL, TLS
- Sending Speed:** 100 emails per hour
- Username:** tanyasmtp+imthaitv.com (indicated by a red arrow)
- Password:** [masked] Show Characters
- Cloak link to:** tanyasalemtk.helpfor.biz

Buttons: Save, Cancel

Step 8: Select the domain to cloak the url at the "**Cloak link to**". These are the verified domains in your FusionHQ account. The selected domain will be used as the default domain shown in the email message as well as in the unsubscribe link.
