

How To Import Subscribers To The Mailing List

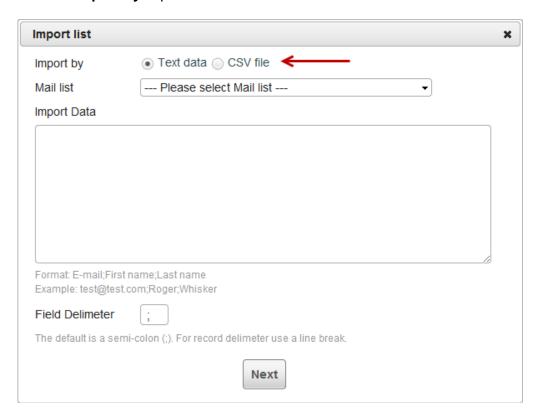

FusionHQ allows you to import the list of the subscribers to the mailing list that uses the SMTP profile only. That can be said that if you have a mailing list created by using FusionHQ mailer, you cannot import the subscribers to any FusionHQ mailing lists. Also make sure that your SMTP profile has been verified.

Then, you can follow the instructions below.

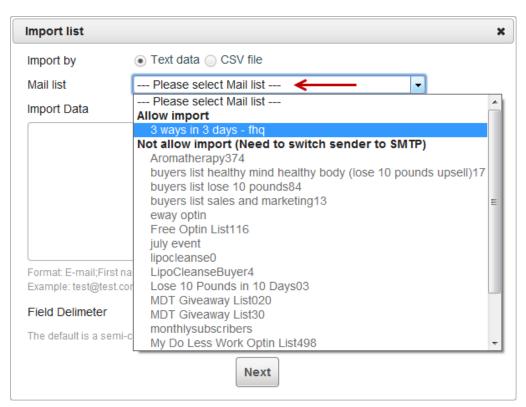

Step 1: Go to "Autoresponders" and continue to "Subscribers". Click "Import" button.

Step 2: Select the "Import by" option: Text data or CSV file.

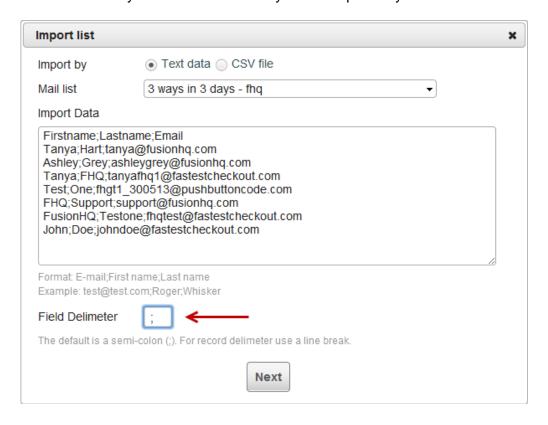

Step 3: Then choose the mailing list that you want to import the subscribers to. You can select only the mailing list that uses the SMTP profile created at the **Setup** >> **3rd Party**.

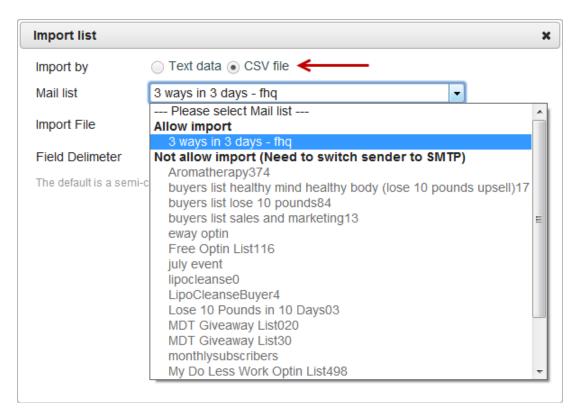

Step 4: Next, if you select "**Text data**" option, the format of the data should not have any space. To start a new record, you should use the new line.

Import list	Text data CSV file
Mail list	3 ways in 3 days - fhq ▼

John,Doe,johi	irst name;Last name
John,Doe,johi	irst name;Last name est.com;Roger;Whisker
John,Doe,john Format: E-mail;F Example: test@te Field Delimete	irst name;Last name est.com;Roger;Whisker

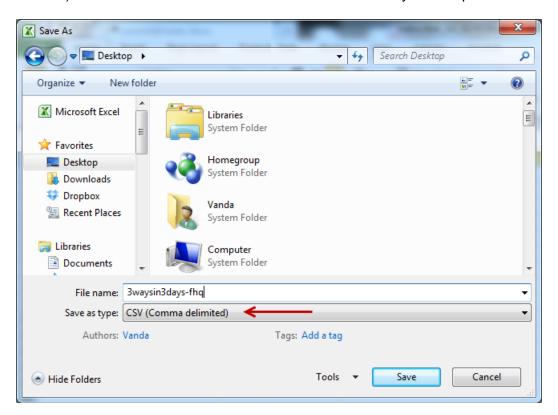

Step 5: You can change the "Field Delimiter". You can use either comma (,) or semi-colon (;) but it should match the format of your data as well. And you can import only 500 subscribers at a time.

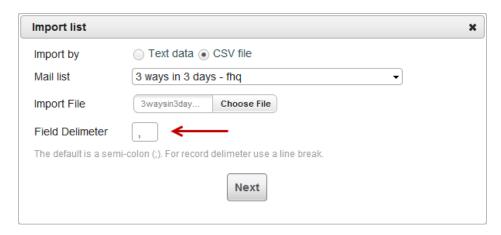

Step 6: If you select **"CSV file"** option, you can also import to the mailing list which uses SMTP profile.

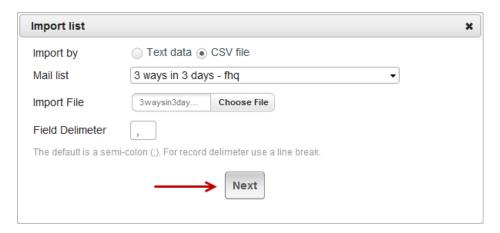

Step 7: Make sure that the file format is in .csv format (*comma-separated values or character-separated values*). Then click **"Choose File"** to browse for the file in your computer.

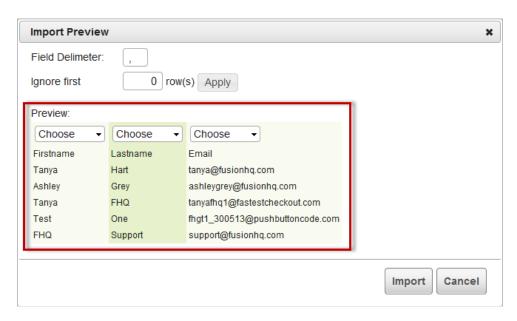

Step 8: Choose the "Field Delimiter" to match the format of your file.

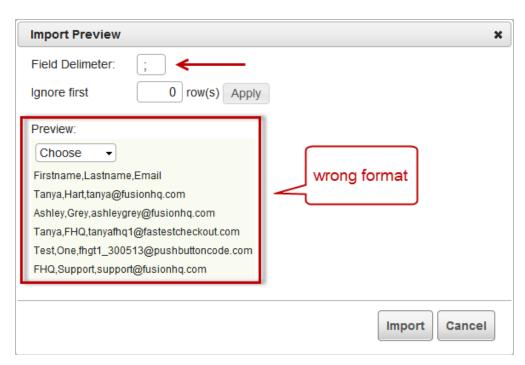

Step 9: For both options, click "Next" to preview the data.

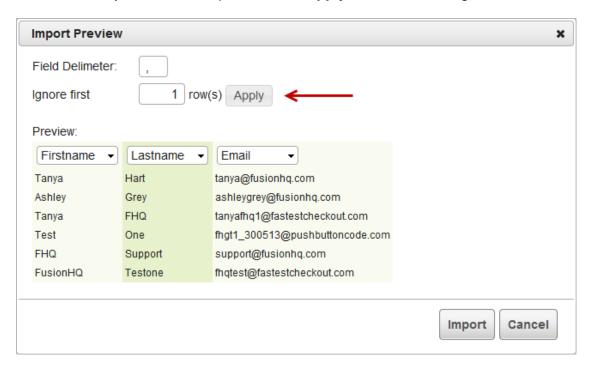

Step 10: If the "Field Delimiter" is correct (*match the data*), the data will be separated into columns.

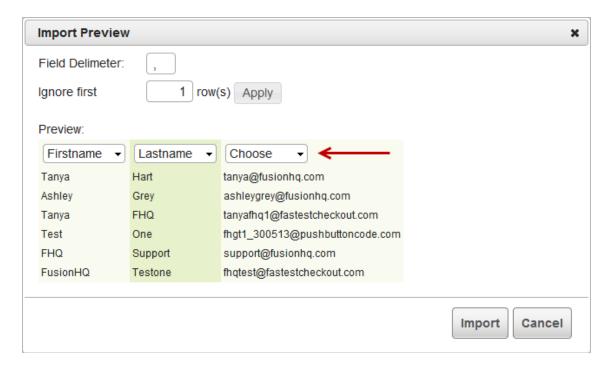

Step 11: If it's not correct, you can change the "Field Delimiter" and click "Apply" to activate change.

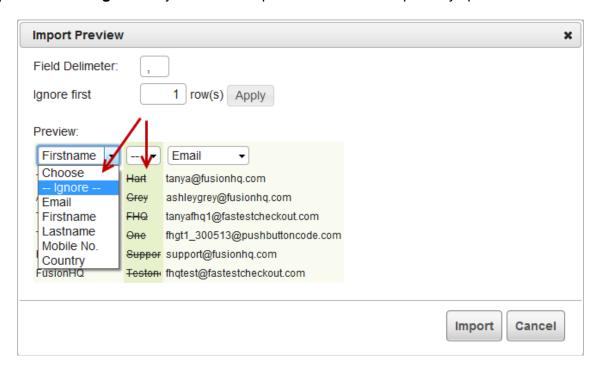

Step 12: "Ignore first.....row" is used in case the first row or the selected rows is not the subscribers' data and you do not to import it. Click **"Apply"** to activate change.

Step 13: Then you need to choose the field of each column from the dropdown menu.

Step 14: Choose "Ignore" if you want to skip or do not want to import any specific column.

Step 15: Once the preview is correct, click "Import" button to import the subscribers.
